

quayside.app

Mya Schroder, Cam Dolan, Kai Iverson
Team: Quaybit, Client: Erik Williams

Create Project

What is your project called?

Give A Bear a Haircut

Describe your project:

The local bear's hair is growing long. I want to give it a haircut

Create

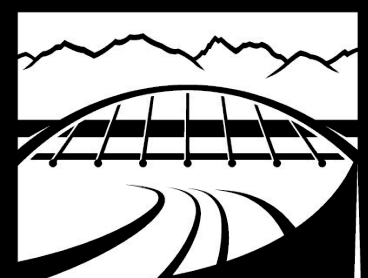

Automatically generate tasks based on a brief project description.

Current Capabilities

1. Using Oauth standard, login into quayside using your social account.
2. Input a brief project description so quayside can generate tasks for your project using ChatGPT.
3. View your tasks on a Kanban board, sorted by status into three different kanban cards. Drag tasks onto different cards to quickly update a task's status.
4. Easily add new tasks to your project tree and edit existing tasks
5. Edit the entire project and share it with other quayside users.

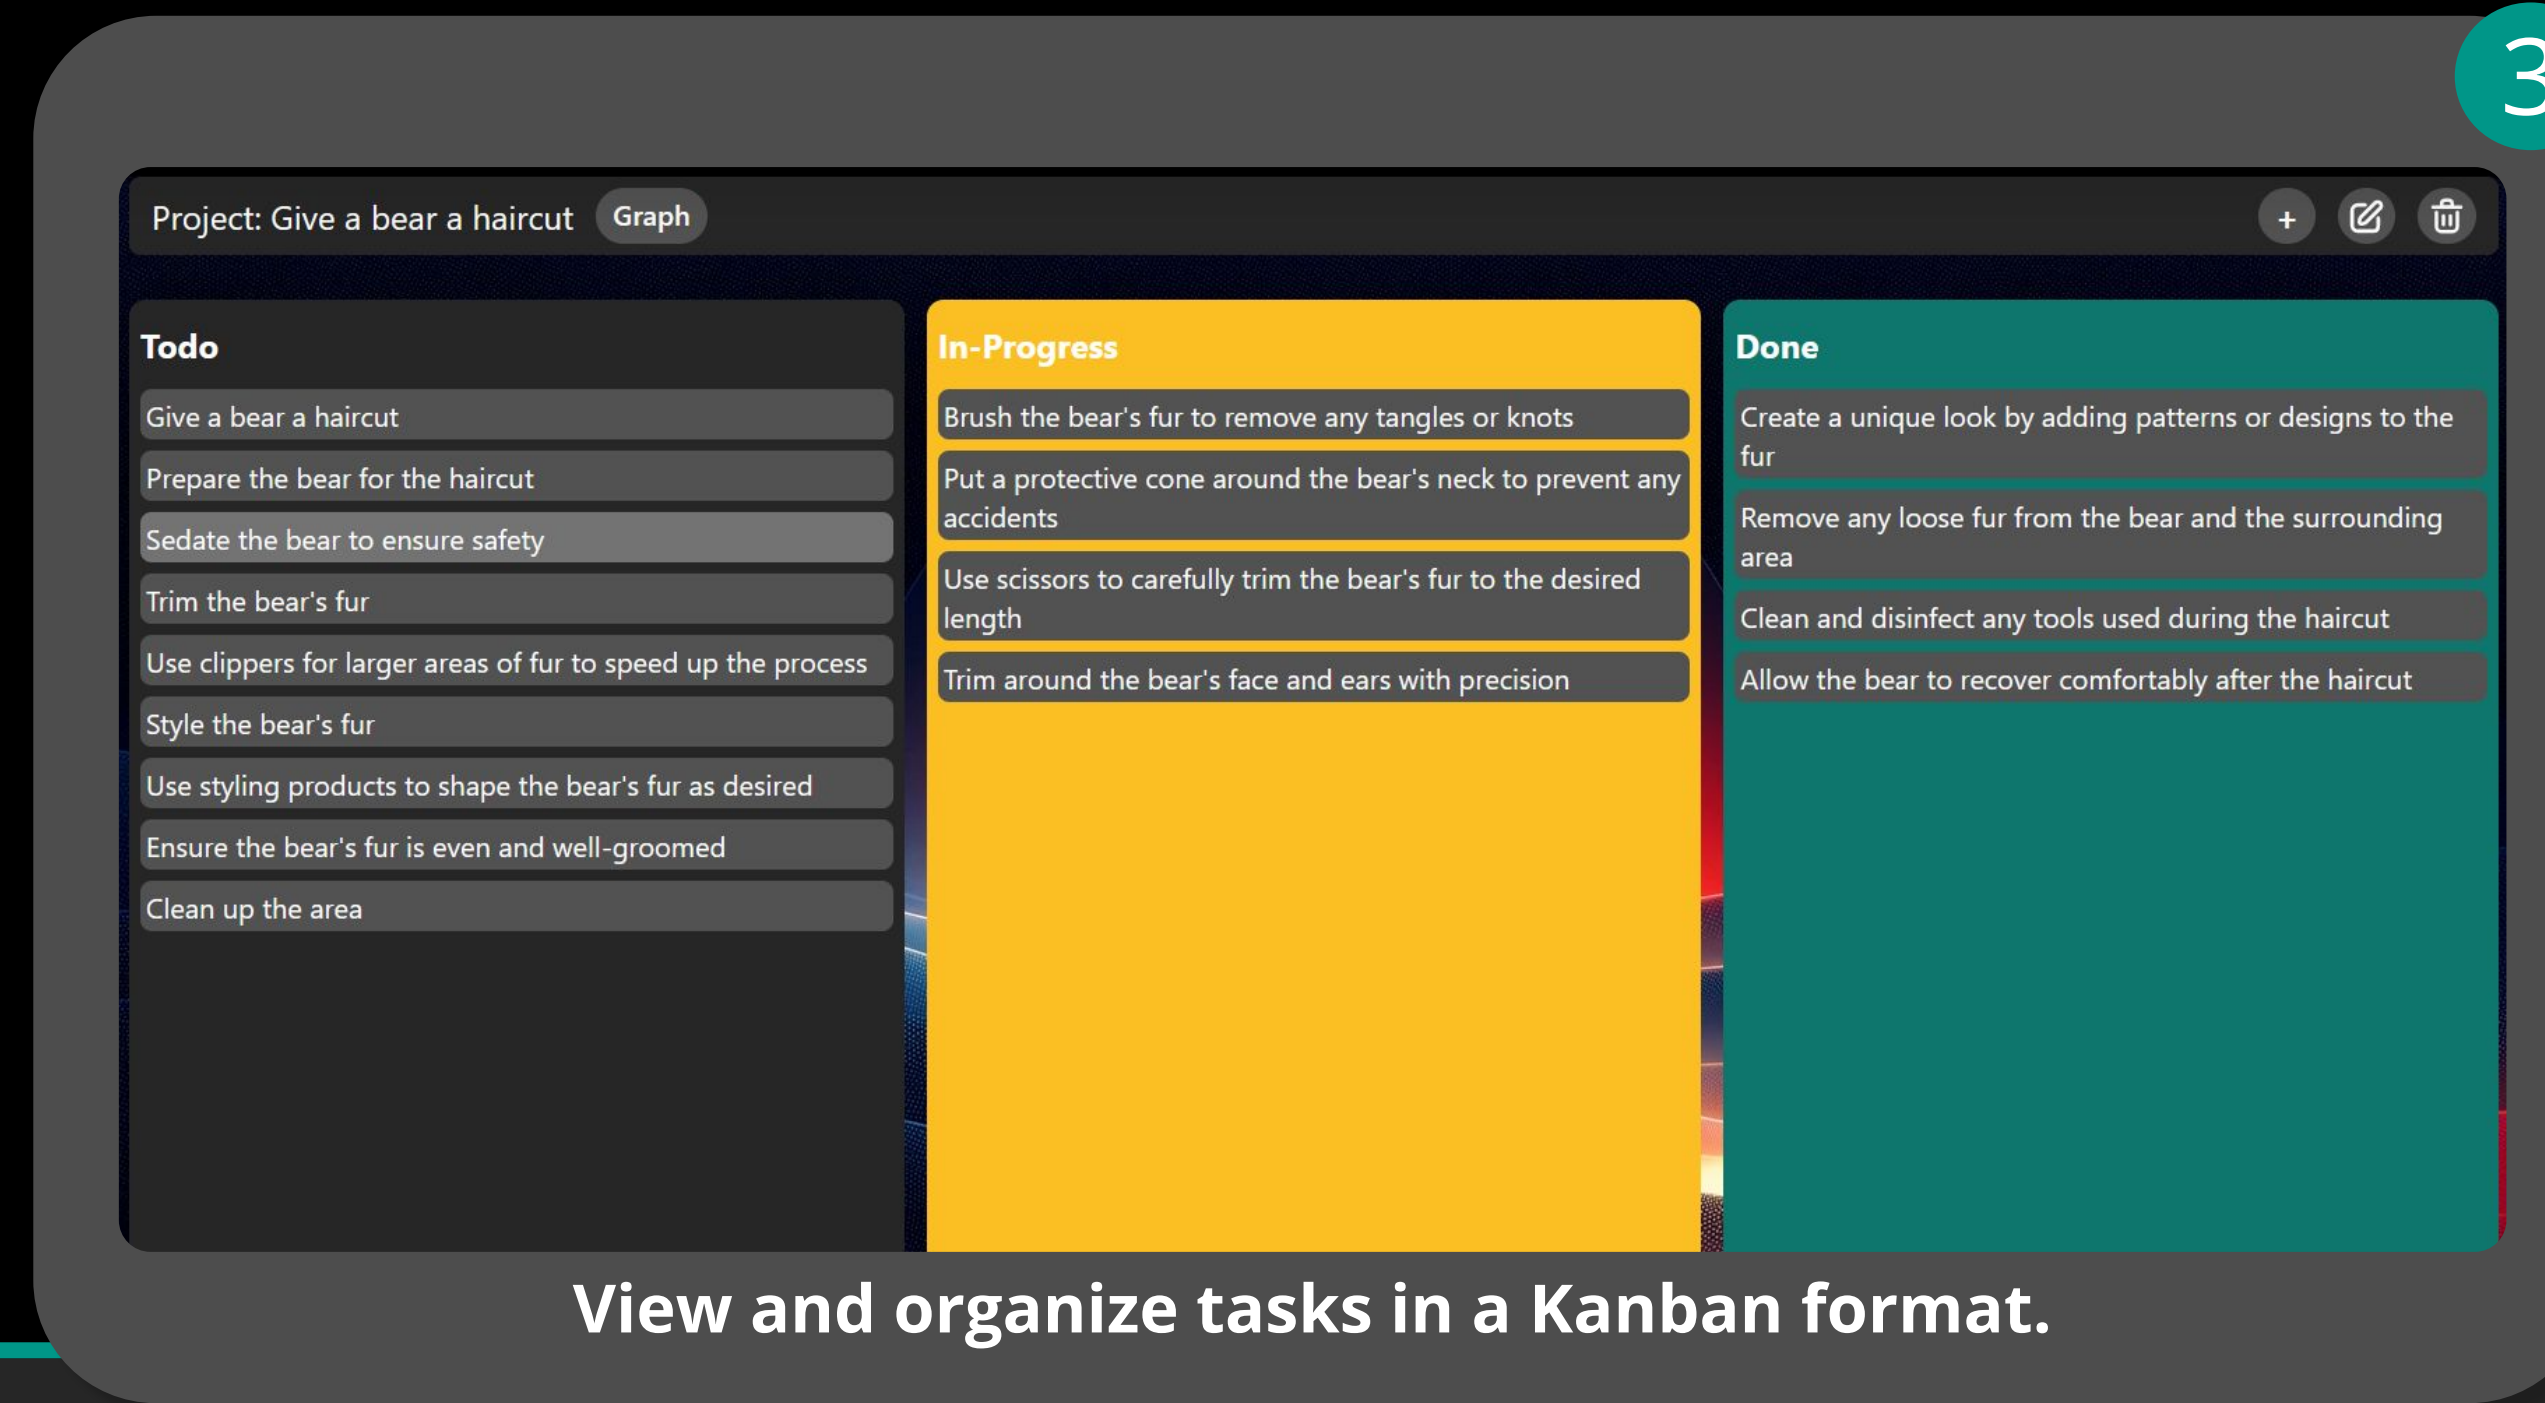

Next Steps

- Automatic task estimation
- Integration with Github and Google
- Text/email notifications and reminders

UAA College of Engineering
UNIVERSITY of ALASKA ANCHORAGE

Department of Computer Science & Engineering

View and organize tasks in a Kanban format.

Login with Google or Github.

Welcome CRD907!

Edit & share projects.

Edit and add new tasks.

Summary

74% of projects do not meet project objectives [1]. quayside.app is a web application designed to fix this problem by automating project management using ChatGPT, a Large Language Model. The application is built on Django with MongoDB, backed by Google Cloud Platform. Follow steps 1-5 for a typical usage example.
